

1. Smart Hospital Management & Appointment Scheduling System with Website

<https://signaltechschedule.com/login>
admin@gmail.com
123456

Description:

Doctors:

- Can create and manage their appointments
- Can manage Patients Admissions
- Can Manage bed Assigns
- Can create prescriptions for their patients
- Can manage Reports
- Access their Payroll Data
- Can set their Schedules
- Can see the latest notice
- Can create documents

Patients:

- Can book a new appointment
- Can see their appointments
- Can see their prescriptions
- Can see details of his doctor
- Can see their Admin and Operation History

- Can see their Invoices + Bills
- Can see list of documents
- Can see the latest notice
- Can create documents

Nurses:

- Can see all patients
- Can manage Beds
- Can allocate Beds
- Can see Reports
- Can see Payrolls
- Can see the latest notice

Receptionists:

- Can create and manage all appointments
- Can see all requested appointments by patients
- Can access all patients
- Can access their payrolls
- Can manage mail service
- Can see all patient cases
- Can manage all services (Ambulance, insurance, Packages ..)
- Can create noticeboards

Case Manager:

- Can manage Patient Admissions
- Can Manage patient Cases
- Can Add Ambulance and assign it to patient
- Can manage mail service
- Can see the latest notice

Laboratorists:

- Manage Blood Bank
- Can see their payrolls
- Manage Reports
- Can see the latest notice

Pharmacists:

- Can manage Medicine categories
- Can manage Medicines
- Can manage Medicine Bills
- Can access their payrolls
- Can see the latest notice

Accountants:

- Can manage invoices
- Can Manage Payments
- Can access their payrolls
- Can Access Bills

- Can Manage Accounts
- Can see the latest notice

Admin:

- Can manage all the departments + Users
- Can manage Departments + Roles
- Can see visual Dashboard
- Can access Hospital Monitoring
- Can access appointments
- Can access Bills
- Can access Medicines
- Can access invoices
- Can access all Payrolls
- Can access settings
- Can create Notice boards
- Can create documents/document types

60+ Modules:

InfyHMS comes with 60+ modules to make the whole process easy and detail-oriented.

- Accountants
- Accounts
- Advance Payments
- Ambulance
- Ambulance Calls
- Appointments
- Beds Management
- Bed Assigns
- Beds Visualization

- Bed Status
- Bed Types
- Billing
- Birth Reports
- Blood Bank
- Blood Donors
- Case Handlers
- Cases Management
- Dashboard
- Death Reports
- Doctors Management
- Doctors Departments
- Doctor OPD Charge
- Documents
- Document Types
- IPD (In Patient Department)
- OPD (Out Patient Department)
- Payrolls
- Inquiry
- Expenses Management
- Hospital Charges
- Hospital Charges Categories
- Income Management
- Insurance Management
- Investigation Reports
- Invoices
- Lab Technician
- Send Mails
- Medicines (+ Inventory)
- Medicines Brands
- Medicines Categories
- Full Inventory Management
- Notice Board

- Operation Reports
- Packages Management
- Pathology Categories
- Pathology Tests
- Patient Diagnosis Categories
- Patient Diagnosis Reports

- Patients Management
- Patient Admissions
- Payments
- Payment Reports
- Pharmacists
- Prescriptions Management
- Radiology Categories
- Radiology Tests
- Receptionists
- Schedules
- Export of Everything
- Settings
- SMS Reminders
- Roles + ALC for 8 Different Departments
- Frontend CMS
- Multi-Lingual
- Multi-Currency

There are also options available to multi-currency and multi-language.

It comes with 9 different languages and 7 different currencies.

Features Description:

Here is the brief description for some of the modules:

Dashboard

Admin can get insights of the total sum of Invoices, Bills, Payments and advance payments beautifully. Also, he will be able to see the total number of Doctors, Patients,

and available Beds. Also, an admin will be able to access all the data and add/update everything in the system and manage currencies and languages.

Billing

Accounts Types

We are providing different types of account types. e.g Credit Account, Debit Account, etc., You can manage all of your accounts and select account type while you are generating Bills, Invoice or taking payments.

Invoices

The invoices module provides a facility to create a digital invoice for the patient. You can select Patient, Invoice Date and add some Discount too. We also provide export invoice support. By which you can export PDF for the invoice that you created.

Bills

Manage the billing for the patient. All you have to do is select the Patient, Admission ID, and related information will be autofill into the form. A Patient name, his/her Insurance details, Admissions date, Discharge date, etc. You can add some extra items to that bill if you want and generate a final copy of the bill. It also supports the export bill as PDF.

Payments

All payments of patients would be managed by this module. Users can get to know how much payments are received and how much is Due.

Advanced Payments

When any patient is going to be hospitalized there would be a certain process to do that is an advance payment. After making the payment it will be debited from that advance payment.

Employee Payrolls

Admin/Accountant can add salary for a specific user including Doctors, Nurses, Pharmacists, Receptionist and many more. The user will be also able to see his/her salary list with details.

Bed Management

Bed Types

Users can facilitate their beds for their better convenience and understanding to be featured. Bed types are VIP ward, AC, Non Ac. etc. Plus you can create as per your needs.

Beds

Bed managers can add multiple beds and their proper information like Bed Type and all other things related to beds. By default, beds are created as available. Once the bed is assigned to some patient it automatically changed to unavailable.

Bed Assignment

Beds are salient resources for serving/caring patients in hospitals. But they also provide a place where patients can be in a queue for a much-needed cure. For getting better hospitalization to the patients, proper bed assignments are playing a vital role in any hospital.

And this process is effectively managed by this module. You can assign a bed to a specific patient by selecting that patient and bed. That bed will be changed to unavailable mode automatically.

Blood Bank

Blood Bags

The blood bank is responsible for managing the bloodstock. This includes maintaining an inventory for each blood group, ensuring an average age of blood at the time of issuing and monitoring what amount of blood that becomes outdated or what amount of blood is not been used for any other reason. So, management staff can get the details about the stock which type of blood group is available in the blood bank.

Blood Donors

You can manage the blood donors list in this section. You can add details of him/her by adding Donor Name, Date of donation, Blood group and, gender.

Cases Management

Cases

Case management is very necessary and needs to be effective for coordinating and providing care that is safe, on-time, effective, efficient, equitable and patient-centered. That can be handled with very ease by this module.

Case Handlers

A case handler is a kind of user in our system who has permissions to manage cases. They will enter all patient cases. So you can manage the staff who is going to handle all cases in this section.

Patient Admissions

After registering a case file, the patient is moved to their respective treatment and make an admission of them. You can add patient admission details by entering details. e.g Select Patient, Admission date, Insurance Policy, etc.

Documents

Document Types

Users can manage various document types for various purposes like verification, certification and many more.

Documents

All possible documents can be stored/managed in this section and the user can re-use those documents for various purposes.

Admin will be able to see all documents, while other users can only see his/her documents.

Services

Insurances

All third party insurances would be managed with whom the hospital tied up. You can select insurance while adding patient admission records. Which makes the claims process easier later.

Packages

This module can manage different services in bunch mode. You can create different types of packages for users. Packages contain different types of services.

Services

Here you can manage the services of hospitals like Ambulance, Home visit and many more. After creating services you can select that service for a specific package.

Ambulance

You can add your ambulance vehicle details in this section. You can simply manage these records by adding basic information like vehicle modal, driver name, vehicle number, etc.

Ambulance Call

In this section, you can see the list of the ambulance with details of the patient who used it. When the ambulance is assigned to some patient it will automatically become unavailable.

Doctors

Doctors

All hospital doctors are managed in this module. Doctor him/herself can manage their patients. Case handling, appointments management of patients, etc. Doctors provide medication for patients & write prescriptions for other medication and create operation reports for patients.

Doctor Departments

There are different kinds of doctor departments as per their specialization and expertise. You can use doctor departments while adding a doctor to the system.

Doctor Schedules

Schedules are also an important section for patients because all can get information from there that when the doctor will be available to get them checked up or appointment for their treatment.

Prescription

Usually, doctors use this section more, because they will add the prescription details for the specific patient after the patient study.

Reports

Birth Reports

Generally, hospitals accept birth records as preferred evidence. A hospital birth record may be either in medical records of the birth or hospital birth certificate which is certified by an official person of a hospital as the custodian of the record.

You can add a birth report by just adding details. e.g Patient, Doctor, Date, etc..

Investigation Reports

A medical test is a procedure that is performed to detect, diagnose or monitor diseases, disease processes, susceptibility or to determine a root cause of disease. Medical tests relate to clinical chemistry and molecular diagnostics and are typically performed in a medical laboratory.

Death Reports

Generally, hospitals accept death records as preferred evidence. All the information regarding death is assembled in this module.

Operation Reports

An Operation report is a report which can be written in a patient's medical record for documenting the details of the surgery. The operative report is dictated right after completion of a surgical procedure and later on transcribed into the patient's record.

Accountants

The accountant is a user in a system that has permission regarding billing/invoicing. They can manage this section. You can create an accountant and able to see the list of created accountant in this section.

Nurses

Nurses can manage patients. Case generation and updating, allotting bed, ward, cabin for patients, provide medication according to patient prescription, manage blood bank and can update status. It also keeps a record of operations, new babies born and the death of patients can be managed by them.

Patients

A patient can view appointments, status & availability of doctors, medications, his/her operation history, admits/discharge history, etc.

Receptionist

Receptionists help patients, dealing with phone call inquiries, assist patients, handle mail, file records and make sure medical operations are running smoothly. Receptionists are also responsible for giving information to patients on what is happening in the clinic and dealing with appointments.

Pharmacists

Help to prepare medications by reviewing and interpreting physician orders and detecting therapeutic incompatibilities. Dispenses medications by compounding, packaging and labeling pharmaceuticals. Controls medications by monitoring drug therapies; advising interventions.

Lab Technicians

Medical laboratory technicians play a key role in the prevention and diagnosis of diseases, such as Cancer, Diabetes, and AIDS. Medical lab technicians work under the supervision of a physician, lab manager or medical technologist and perform laboratory tests on specimens.

IPD (In Patient Department)

Admin can manage Patient IPD details in this module. IPD is like Patient admission where admin can manage all details when patient is admitted and which bed he/she reserved.

There is charges management too in which patient charges should be managed and from it admin can generate bill.

Admin/Doctors/Receptionist can able to manage IPD module data.

Consultant Register

By using this module admin can add constant for patient. and also add some extra instructions.

Diagnosis

By using this module doctors can diagnosis details to patient IPD. doctors can add report type, report date and also attached some document while adding report.

Timeline

Timeline is like one-one conversations. doctors or admin can add timeline records by date and attach documents to it. Patient should be able to see all the timeline details entered by his consultant.

Prescription

Doctors can write prescription for patient. in which he can add header and footer notes. and also add medicines details, which medicine patient needs to take and in how much dosage of it.

Charges

By using this module you can add charges of patient by charge categories. will do sum of all added charges while generating bill.

Payments

Admin can manually accept cash and cheque payments of patient. added payments will be reflected to bill.

OPD (Out Patient Department)

Outpatient Department. An OPD is a hospital department designed to be a first contact point between the patient, and the hospital staff. This is very usefull to track patient records. it has 3 more sub modules from where you can manage patient details.

Visits

By using this module you can check which patient has visited the hospital at which time. all your patient visiting history will manage into this module.

You can also ask patient to again revisit at specific date.

Timelines

Admin/Doctors/Receptionist will add timelines to here for patient. here you will add some suggestions for patient. that which medicine he want to take and what is best for him.

You can add attach a document also for a specific timeline.

Diagnosis

By using this module doctors can diagnosis details to patient IPD. doctors can add report type, report date and also attached some document while adding report.

Appointments

Admin/Doctors/Patient will be able to see the list of appointments. Admin can see a list of all appointments. It also has support for the calendar view for appointments. You can see a list of appointments in the calendar form too.

Medicines

Medicine Categories

Users can manage medicine categories as per their needs or usage.

Medicine Brands

Users can manage medicine brands as per their needs or usage.

Medicines

Users can manage all the medicines and manage their inventory stock as well. Users can see the actual medicine name, side effects all the information regarding the medicine that was given at the time of adding into the system for your better usability.

Inventory Management

You can manage all your system items stock and its price and quality information in this module.

Item Categories

You can manage item categories in this module. e.g Cotton packs, Equipments, etc.

Items

In this module you can add your inventory item by its type and its unit (kg, qty).

Item Stock

In this module you have to add the item to the system. like if you are purchasing items from some seller and how many quantity you are purchasing.

Quantity is the available quantity of that item. and it will decrease when someone issues it.

Issue an Item

Here in this module you can issue an item by item name and how many quantity the person is issuing.

Please note that issuing quantity will be deducted from actual available quantity.

Front Office

Call Logs

By using this module you can track your hospital call details, that which call is received from who. you have to add entries for that.

Admin / Receptionist are able to access this module. you can also export the all list of call logs to excel.

Visitors

Admin / Receptionist are able to do entries on this module. you can track your hospital visiting records here.

You can add visitor name and purpose of his visit, date of visiting, etc. you are also able to export the list of records to excel.

Postal Receive

Here you can track your postal records, what couriers you are receiving, and from who. you can also add an attachment and add the date of receiving postal.

Admin / Receptionist are able to manage this module. you are also able to export a list of postal receive records to excel.

Postal Disppatch

Here you can track your postal dispatch records, what couriers you are dispatching, and for who. you can also add an attachment and add the date of dispatching postal.

Admin / Receptionist are able to manage this module. you are also able to export a list of postal dispatching records to excel.

Export

You can export all of the data from your various modules to use it in different systems.

Settings

Notice Boards

Using notice boards, notable information or announcements would be conveyed to every person who is indulged within the hospital environment.

Settings

Admin can manage the system language of their choice or comprehensive understanding & also can be managed brand name for the system.

Multi-Currency

We are supporting 7 different currencies. Admin can select a current currency for their application and make related changes to all modules.

Multi-Language

We are supporting 9 different languages. You can select whatever you want. It is specific to the user and also recognized after logout.

Other Settings

Admin can manage Hospital Name, Hospital Address, Hospital Email, Hospital Open/Close Hours and many other settings.

Mail Service

This feature is quite cool, you can send mail to your employees. All you just need to enter their email, subject, and message that you want to send. Submit it and the related user will get your email.

Beds at Your Fingertips

Experience optimized patient care with our advanced Bed Management system. Seamlessly allocate, track, and manage hospital beds in real-time

2: Appointment Scheduling System - Online Meeting & Booking Management - Calendly with Website

<https://signaltechdemo2.com/login>
admin@gmail.com
123456

Feature Description:

Here are some Key Features and Concepts that InfyCal provides.

Its an event schedule booking management application that allows users to create events with schedules.

Beautiful Landing Page

We are providing a beautiful landing page with a mobile-friendly UI, from where users can do registration to the system.

Super Admin Panel

Dashboard

Dashboard from where you can get the overall information about the system, how many users are there? total events? etc.

Users

You can see lists of registered users here and add new users if you want.

Personal Experience

We are providing the Personal Experience that will be users into the onboarding process of customers.

Subscribers

Users can subscribe to your system via the landing page and you will get the lists of subscribers from here.

You can use this data for marketing purposes if you want.

Subscription Plans

From here you can create a different kind of plans that will be used by the users/customers registering into the system.

You can define the plan name, price, currency, and features needed to add on that plan.

Front CMS

From here you can manage the landing page content. you can change each text showing on the front side from here.

You can add new testimonials, update the images, update the content, and many other things from here.

Settings

Here you are able to manage the application settings, like application name, email, phone, and other information.

User Panel

Dashboard

Users are also able to see the dashboard with its related data.

Users can see his events information from the dashboard.

Events

Users can create events from this module. this is the main part of the system.

You can create the event from here by defining the event name, location, and event type. you can later add more information to event like you can set the schedule for the event, how many days it will be activated, and the time for it.

Once an event will be created, we are generating a unique link for it. by using it your users are able to do booking into that event.

Schedules

From here you can manage the schedules that are going to use in events.

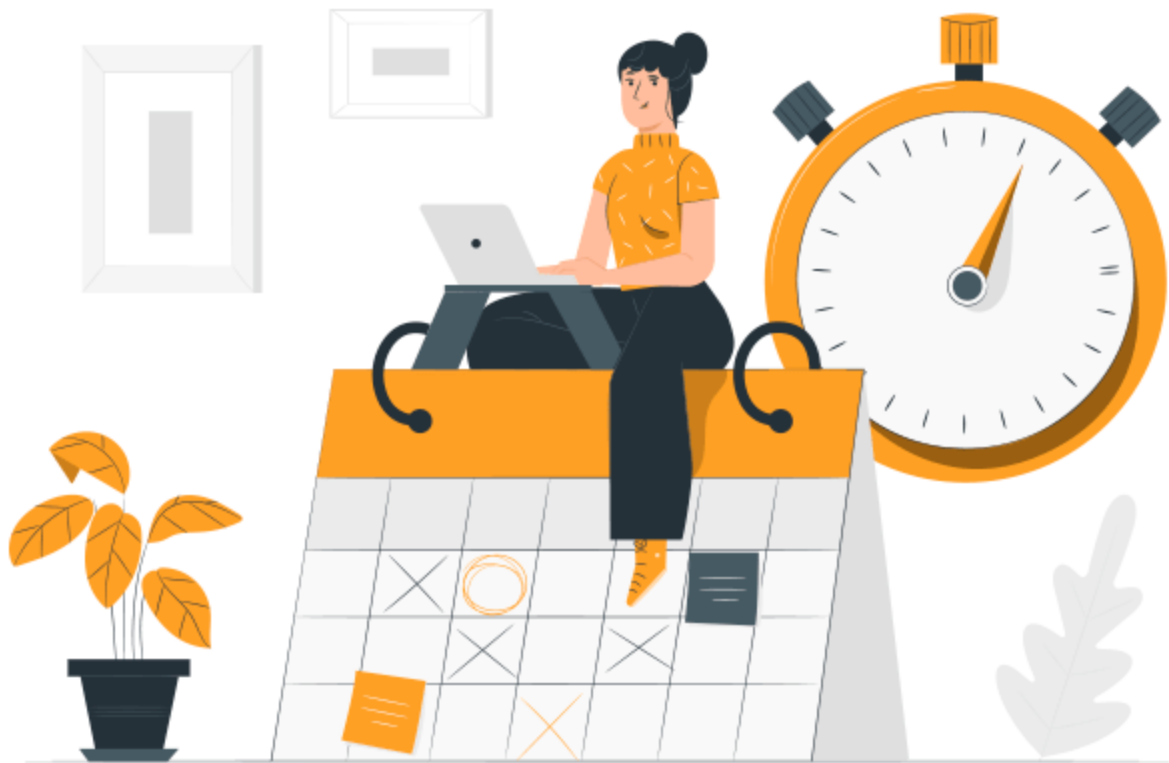

You can create different kinds of schedules from here and later it will be used in events, you can set the slots timing for each day from here.

Scheduled Events

When users are doing booking to the events it will be considered as scheduled events, its kind of appointments.

So here you can see the lists of users who are booked to the events and also see the related information of that events.

We are providing a beautiful landing page with mobile-friendly UI, from where users can do registration to the system.

5: Clinic Management System & Doctor Patient Appointment Management Software with Website

<https://signaltechhcmsa.com/login>
[admin@gmail.com](https://signaltechhcmsa.com/login)
123456

Description

Feature Description:

Here are some Key Features and Concepts that InfyCare provides.

This is SASS application so there will be one super admin for whole system, which will manage the main landing page of website and other contents.

Users can sign up into system, and they will be considered as admin, so each user will get their separate admin panel from where they can manage their specific InfyCare contents.

Here are some Key Features and Concepts that InfyCare provides.

Landing Page

Its comes up with beautiful landing page, which helps patients to get information about the hospital and doctors and their specialities.

Patient can book appointments from landing page and also registered to system. They also can submit queries via contact us form.

Admin Panel

We have created beautiful and user attractive admin panel to manage the contents for landing page.

Admin can manage all the doctors / patients / appointments and also able to create new staff's account with assigned roles / permissions.

You can change the system settings from admin panel, like you can change the hospital schedule time, change contact email, number, etc.

Dashboard

Dashboard is more important thing in each application, as you can get quick information from there.

Here you can get information about today's appointments, total registered patients and etc.

Staff Management

You can create new user accounts with specific permissions if you want. Staff can also able to do login and he can see the lists of modules as per assigned permissions.

Doctors Management

Here you can see lists of doctors that you have added to your system, right now only admin can add new doctors. you are also able to change the details of doctor too.

Patient Management

Here you can manage the patients that registered via landing page or added by you. You can change their password and other details from here.

You can see lists of appointment booked by specific patients in detail screen.

Appointments Management

Appointments are generally for patients, but some case if patient wants admin to book their appointment, at that time this will be usefull. Admin can book new appointments from here on behalf of patient.

Also, you can see lists of appointments here, there is another option there Calendar view, by clicking on it you can see the lists of appointments in calendar view.

Patient Visits Management

Admin can add / delete patient visits records from here. Patient visits are the records who will be entered by the doctors to track patients visits and the other information about their patients.

Services & Categories Management

Here you can add different kind of Services and its categories, Services are generally used in appointments. Patient will Select the service while booking the appointments.

You can define the service charge per service.

Front CMS

Admin can change each content of landing page from here. e,g Upload new images for sliders, change some texts on it, etc.

Schedules

Schedule means the hospital timing per day. Admin will define the hospital time from Settings -> Schedules.

Then doctors are able to choose time between the hospital time, if Admin is saying that hospital will be closed on sunday, then doctor will not able to choose schedule time on sunday.

Settings

Settings will include some other set of modules .

- General Setting
- Clinic Schedules
- Roles & Permissions
- Currencies
- Countries
- States
- Cities

Doctor Panel

Dashboard

Doctors can see lists of today's appointments count and other widget in dashboard. they can also able to see the lists of recent appointments as per day / week / month.

Appointments

Here doctors can see their appointments only, they can later change the status to checked-in, check-out and cancel.

Schedules

Doctor can set their availability as per day in this module, so patient will be booked slots accordingly. if doctors are selecting that Monday they will be available from 10:00 – 12:00 then patient can see slots between that time only.

Patient Visits Management

Here doctors can add new visit record for patients, and track their health progresses.

Patient Panel

Dashboard

Patient can see lists of appointments in dashboard, they can see today's and upcoming appointments here.

Appointments

Here you can book new appointment with specific doctor by selecting different services. Later you can cancel the appointment if you don't want to go. Also, you can delete your appointment records too.

Visits Listing

Here you can see the lists of visits added by your doctors. in visit details screen you are able to see the lists of prescriptions, notes, observation notes and problems added by doctor.

How It Works?

Here we have described the basic flow of our hospital appointment system, that is how it's actually working.

01

Set Hospital Schedule

The hospital owner will schedule the time of the week as per its opening time and closing time.

02

Patient Registration

The patient will do the registration via the landing page or the admin will add it from the admin panel.

03

Doctor Schedule Management

Doctors then schedule their time with respect to hospital time.

04

Book Appointment

Patients will choose the doctor and time slot as per their preferable date.

05

Check-in / Checkout / Cancel Appointment

Doctor Features

Doctors are allowed to manage their appointments and also can manage the patient's visits, they can add problems, prescriptions and other details to patient visits details.

Appointment

Lists of appointments with calendar view.

Patient Visit

Patient visits management for doctors.

Schedule

Doctors then schedule their time with respect to hospital time.

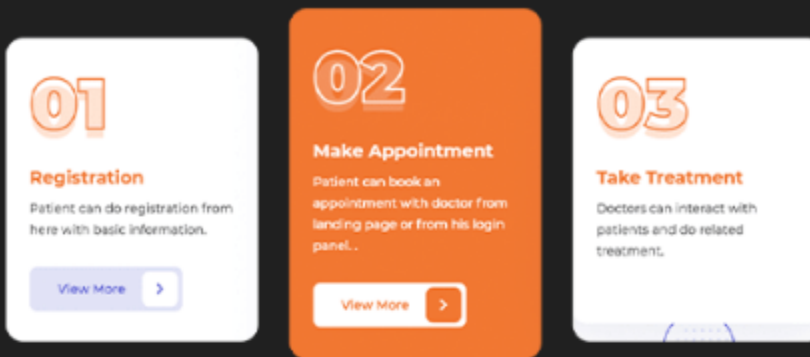

Landing Page

Its comes up with beautiful landing page, which helps patients to get information about the hospital and doctors and their specialities.

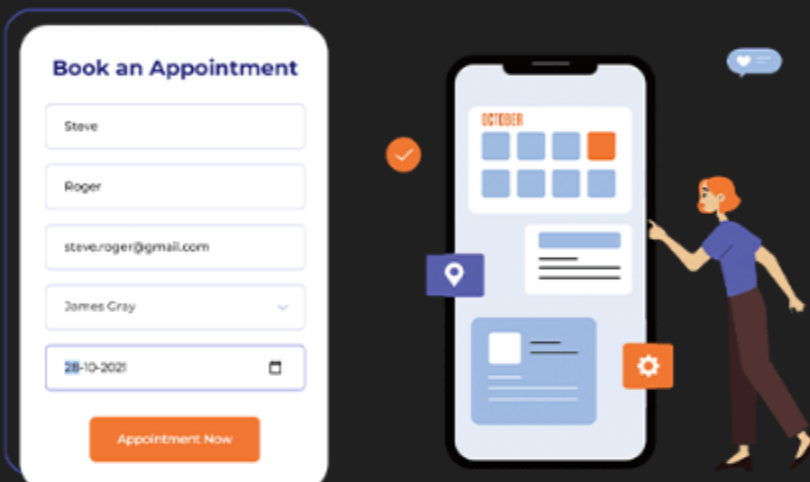

How It Works?

There are 3 basic steps in any clinic, which are - Do Registration, Make an Appointment & Do Treatment.

Book Appointment

Patients can book an appointment from landing page or from his login panel.

12: Medical Equipment Maintenance Software with Website

<https://signaltechgdas.com/login>
[admin@gmail.com](https://signaltechgdas.com/login)

123456

Description

Features

- **Hospital & Department Module**
 - Add/Update/Delete the Hospitals and departments
- **Equipment Management**
 - Keep records of your equipment
 - Purchase, installation and server details
 - Generate unique code for equipment with makes it easy to identify the hospital and department it's installed in
 - QR code generator for Equipments
 - Equipment History Page
- **Breakdown & Preventive Maintenance Calls**
 - Handle Breakdown and Preventive maintenance calls for installed equipment, assign them to engineer and track the handling.

- **Calibration Report and Stickers**
 - Calibrations reports and their sticker printouts to stick on installed equipment
- **AMC and CMC Management**
 - AMC and CMC contracts with Hospitals covering equipment details
- **Time Indicator and Equipment Reports**
 - Time Indicator reports to efficiently improving the workflows
- **Automated Reminders**
 - Reminders for Preventive Maintenance calls and Calibrations
- **User and Permission Management**
 - User Roles with selectable permissions

NEW FEATURES

Some Exciting Updates in Our App !

An illustration of a person in a purple shirt and light blue pants standing next to a large purple funnel. The person is placing small, colorful icons (a gear, a star, a heart, etc.) into the funnel. A small icon of a hospital building is visible at the base of the funnel. The background is light purple with faint, larger versions of the funnel and icons.

Filtering by Hospitals

Added Hospital-specific Filters Across key Modules to Enhance Organization and Efficiency.

An illustration of a person in a purple shirt and dark pants standing next to a large screen. The person is pointing at a list of items on the screen, which has several circular icons next to them. The background is light purple with faint, larger versions of the screen and icons.

Permission Controls (Updated)

Feature wise User Permissions for Enhanced Control.

An illustration of a person in a purple shirt and light blue pants standing next to a screen. The screen displays a bar chart with four bars of increasing height, a line graph, and a small icon of a hospital building. The person is pointing at the bar chart. The background is light purple with faint, larger versions of the screen and icons.

Description

Features

1. Setting: general setting such as logo, blog title, website icon, home page
2. Supports multi-languages (Default languages: ENGLISH and arabic and German)
3. Contact User (Add/edit/remove Listings) (for admins and managers only);
4. Manage users (Add/edit/remove users) (for admins and managers only);
5. Categories: category name, slug, description and feature image.
6. User: name, email, password, profile picture and description
7. Direct access or invalid URL press stopped for each pages
8. Manage ads (url/image/google ads) (left for you option);
9. SEO meta data setup for each post, page and category
10. image: easily upload multiple images with ajax.
11. Statistics of important data in dashboard
12. This script comes with a Powerful CMS
13. Powerful admin backend like WordPress

14. This script comes with a powerful CMS
15. Clean coding with proper commenting
16. Secured coding against SQL injection
17. Tools: support import and export
18. Send Message From user to admin
19. Documentation file included
20. Easy to use and customize.
21. Send Message From user to admin
22. Doctors Scheduling Management
23. Doctors Time Off Management
24. Online Appointment System
25. Online Emergency System
26. Online Tickets System
27. User Level-wise Report
28. User Management
29. Bootstrap Based Design
30. Causes Management
31. Manage Services
32. Manage my Favourite
33. Manage My Messages
34. Pet Management
35. Manage Departments
36. Manage Bed managers
37. Manage Services
38. Manage Tickets
39. Manage Request Ambulance
40. Manage News
41. Manage Medicine Report
42. Manage Terms condition

- **Security**

- Built on powerful Laravel Framework that has been tried and Tested by Millions of Developers.
- Passwords are encrypted using php library to make sure your Data is Safe.
- Totally secured system (SQL injection, XSS, CSRF)

- **Media Builder**

- Seo Optimized For Services Using Meta keywords and Meta tags.
- Members / Admin Add Unlimited Recipes.

- **Admin Panel**

- Totally with this admin panel can manage and control every thing appear in website with Full Option.
- Change website settings(Name, Logo, Favicon, Timezone, Site Description...)
- Manage sliders that appears on website (Add, Edit, Delete, View).
- Change website seo settings (meta keywords, meta description)
- Manage Media categories (add, edit, delete, view).
- Flexible control panel system with full options.
- Approve member Media to appear on website.
- Only admin role can login admin panel.
- Can view/delete Users Subscribed.
- Change social media pages.
- **Other Features**
 - Easy to install and usability(without any coding knowledge needed).
 - Fully Responsive for Website and admin panel
 - Awesome Design for Website and admin panel
 - Clean Code with height performance.
 - Easy Customization
 - Friendly with seo.
 - High performance.
 - More features will coming up.

14: POS System with Inventory Management Software

<https://signaltechdemo1.com/#/login>

admin@gmail.com

123456

Description

Admin Panel

Easy POS

Attractive and very user-friendly POS screen by using you create do orders.

You can see lists of available products there and filters by categories and brand. we are showing the available quantities there so its will remind user that they may have to purchase new quantities.

we also have added support for Barcode Scanner, when you scan any product code that is in POS system it will be auto added as order item.

Dashboard

It has very beautiful dashboard view. which comes up with very informative data.

You can track sales / purchases and returns count from here. There is different kind of graph view are available too. its showing following charts and data.

- This week Sales & Purchase
- Top Selling Products – Year Wise
- Top Selling Products of current month
- Top 5 Customers
- Recent sales listing
- Stock Alert

Users Management

It has the users' management, where you can create separate super admin users. that users will be able to access the POS system with same rights as super admin as we are creating them as super admin users.

Customers

You can manage the customers by using this menu. you can create new customers and delete them or update the existing customers too.

Customers will be used into POS screen, where we can select them to which items they are purchasing.

Warehouse

Warehouse will be used to manage the stocks of products.

Same product may available in different warehouse, so of course one product will have 10 stock in warehouse A, and 5 stock in warehouse B.

So in POS screen when you choose the warehouse it will return related available quantities.

Products

You can manage your lists of products from this menu, you can create / edit or delete existing products via this interface.

While creating products you can specify the product price, its unit & the stock alerts that will help you to re-fill the products' quantity when stock is not available. you can also choose the barcode symbology to generate the barcode which you can later scan it into POS screen.

Print Barcode

Sometimes its needed to have barcode on papers to scan it. that time you can use this feature.

By using this feature you can print same barcode with multiple times on paper. you have to select the warehouse then you have to choose the product and the number of quantities that you want to print on paper.

You can also preview the print and choose different types of paper sizes here.

Brands

Brand will be used while creation of products, you can manage the lists of brands via this section.

You can also upload the brand logo.

Product Categories

Product categories will be used while creation of product, you can create different kind of categories here and later it will be used when we create / update new product.

Expense Categories

Expense categories will be used while we create new expense. you can create or update new categories from here.

Expenses

To track your companies lists of expenses this menu will be most usefull. later you can prepare reports from this data.

You have to add the title of expense, and the warehouse and the expense category to create new expense, and yes expense date as well.

Units

You can create different kind of units that will be used by products.

Units will be used to identify the product, either it will be in kg, or either it will be in pcs. you can define the name of the units and its short name too.

Currencies

As we are supporting multiple currencies, this menu will be used for many customers that is not from india.

They can just add their own currency and choose it from the globals setting, so they can see their selected currency everywhere.

Purchases

Purchases will be used to increase the available stock.

ks quantity. let's say warehouse A have product's quantity 5, and now we want to add 50 new quantity, you can use this functionality for that.

You have to select the same warehouse and the product in which you want to increase the quantity or we can say you want to purchase more quantities, do it and hit save.

You will now see the updated quantities.

Purchase Return

In some case we may have to return the purchased products, so we can use this options to track the purchase returns.

Based on this later we are generating reports and displaying data into dashboard.

Sales

Sales is kind of same as return, when we sale any product it will decrease the available quantity.

So let's say we have Product – A with quantity 50, and we are selling it with quantities 25, later we will have available quantities 25.

Sale Return

its same as purchase return, when any sale will be returned it will affect the available quantities.

Number of returning product sales quantities will be increased into available quantities.

Reports

Based of the stored data we are generating different kind of reports, which help you to determine the current state of your POS.

We have following reports available right now.

- Warehouse reports

- Sales reports
- Purchase Reports
- Stock Reports
- Top Selling products Reports

Key Feature

- | | | |
|-------------------|-------------------|-----------------------|
| ➤ Easy POS screen | ➤ Units | ➤ Product Quantity |
| ➤ Dashboard | ➤ Currencies | ➤ Print Barcode |
| ➤ Staff's | ➤ Purchase | ➤ Brand Categories |

Easy to use POS screen

An easy-to-use POS (Point of Sale) screen is a user-friendly interface designed to streamline and simplify the process of managing sales transactions and customer interactions in retail or hospitality settings.

Multi-Warehouse Inventory Management

Efficiently oversee and control products with varying quantities across multiple warehouses, optimizing stock distribution and ensuring streamlined inventory management.

Supporting Barcode Scanning

Barcode scanning in a Point of Sale (POS) screen involves using a barcode scanner to capture and decode barcode information from products for efficient and accurate transaction processing.

Stock Alert

Managing your inventory just got smarter and more efficient with our cutting-edge Stock Alert feature.

Description

Website Features :-

- 1. Quick book appointment
- 2. Department of hospital
- 3. Facilities in hospital
- 4. Department wise sorting of doctors
- 5. Price list of each department services
- 6. List of all doctor
- 7. Doctor Features
 - Name and category
 - Star rating of doctor
 - Descriptive details of doctor
 - Availability timing
 - Service list of doctor
 - Book appointment to doctor
 - Chat with doctor
- 8. Emergency contact number on each department
- 9. Email contact of department
- 10. Quick book appointment features
 - Select department
 - Select doctor
 - Select service

- provide basic contact details
 - book appointment
- 11. Gallery of clinic/hospital
- 12. Check photos of each category
- 13. Health packages
- 14. Login for user
- 15. Register for user
- 16. User features
 - Check upcoming appointment
 - check past appointment
 - Check subscription history
 - Edit profile and profile picture
 - Change password
 - Chat with doctor
 - Add review to doctors
- 17. Payment gateway integrated
 - Braintree
 - Authorized.net

Admin panel or backend Features

- 1. Login for Admin
 - List of appointments
 - Add/Edit of doctors
 - List of patients
 - Edit health packages
 - Chat between user and admin
 - Manage gallery and photos
 - Check reviews by user
 - List of Subscription paid by user
 - Manage Facilities
 - Manage Department
 - Send notification
 - Manage payment gateway
- 2. Login for doctor
 - Dashboard to check today's appointment
 - chat with user
 - Edit his own profile
 - appointment list
 - check reviews by users

Single Clinic/Hospital Management
